SOLAR

## OUR EXCLUSIVE 14 TUBE ABSORBER DESIGN WILL PROVIDE YOU WITH MAXIMUM HEAT

-  Solar heaters utilise the sun's free heat and have minimal operating costs.
-  Extend your swimming season and maximize your investment
-  Colour matching absorber makes your solar nearly invisible.
-  Solar systems typically last 15 - 20 years and are very low maintenance.
-  Solar Heating is relatively simple to install.
-  Highly efficient collector technology gives the full advantage of solar in a compact form.

The correct size of a solar system can add around 10 degrees to your current pool temperature during good weather conditions, even more if used with a pool blanket.

The sizing of a pool heating system is based on several factors, including the size and shape of the pool, pool shading, geographic location, required swimming season and desired pool temperature, windy conditions and for solar the direction of the roof, (i.e.; north, east west, south). It is extremely important to correctly size a heating system for good performance. For further information, you can contact us on 1800 243 887.
